Regarding claim 3, the wall area 3 is at least one locking plate pointing into the inside space of the base sleeve as shown in figure 4.

Regarding claim 4, wall area is constructed as at least one bulge pointing into the space of the base sleeve in the base sleeve wall is shown in figure 4.

Regarding claim 5, figure 4 shows how the metallic base sleeve has at least one opening to house the sealed end of the lamp.

Regarding claim 6, the metallic sleeve 3, has at least two plates 11 which are molded on to two mutually opposite edges of the opening and rest against one of the broad faces of the sealed end of the lamp envelope.

Regarding claim 7, the broad face of the sealed end of the lamp envelope is provided with at least two molded on guide webs 5, extending in the longitudinal direction of the vehicle headlight bulb which serves as a stop for in each case one of the two plates.
